Agilent N4916B
De-emphasis Signal Converter

Data Sheet, Version 1.0

Accurately characterize your multi-gigabit serial interfaces with the 4-tap de-emphasis signal converter N4916B with optional clock multiplier

Key features:

- Generates 4-tap de-emphasis with variable de-emphasis levels up to 12.0 dB
- Supports data rates from 660 Mb/s to 10.5 Gb/s
- Tolerates non-balanced patterns
- Transparent to jitter
- Flexible usage as front-end for J-BERT N4903B, ParBERT 81250A or other pattern generators
- Optional clock multiplier (Option 001)
- Small size
- Programmable via J-BERT N4903B or stand-alone

Agilent Technologies

Agilent N4916B Applications

Accurately emulate 4-tap de-empashis

The de-emphasis technique is used in many high-speed serial bus interfaces to compensate for signal distortions caused by the transmission of multi-gigabit electrical signals over PC board traces. With data rates moving beyond 5 Gb/s the simple 2-tap de-emphasis is more and more replaced by 3- or 4-tap de-emphasis techniques, i.e. for front-side buses such as QPI, HT, or 10GBASE KR backplanes. The new N4916B de-emphasis signal converter enables R&D and test engineers to accurately emulate transmitter de-emphasis with adjustable 4-tap de-emphasis levels, while being transparent to jitter even on non-balanced pattern streams. It can also be used to compensate for distortions caused by cables, fixtures or testboards in the test set up.

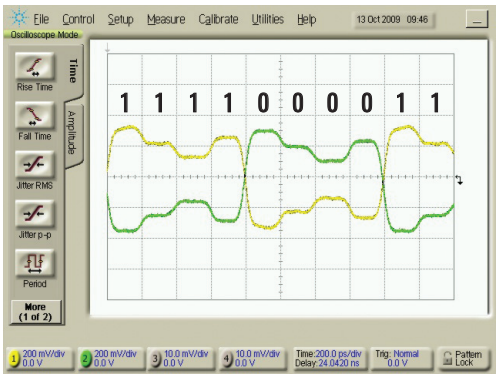

Figure 1. Differential signal with variable de-emphasis on 1 pre-cursor and 2 post-cursors generated by N4916B

The de-emphasis technique is used in many popular gigabit serial bus interfaces operating at data rates above 1 Gb/s, i.e. PCI Express®, USB3, SATA, 10GBASE-KR, 40GBASE-KR4, QPI, Hypertransport, memory buses.

Analyze error, jitter or eye performance of devices using half-rate clocks

Half-rate clocks are used in some of the highest performance serial bus interfaces, such as front-side buses QPI and Hypertransport, or memory buses.

By using the N4916B's clock multiplier (Option 001), an external clock is provided, to use the analyzer of J-BERT N4903B can be used to accurately characterize the error, eye, jitter performance without using a CDR.

Agilent N4916B Applications

Emulating transmitter de-emphasis

The de-emphasis signal converter N4916B allows emulating a transmitter by varying the de-emphasis in a wide range and for each of the three cursors individually. The N4916B is transparent to jitter on the data and clock signals from the pattern generator. The N4916B outputs are DC coupled, so that even unbalanced pattern streams can be generated without DC drifts.

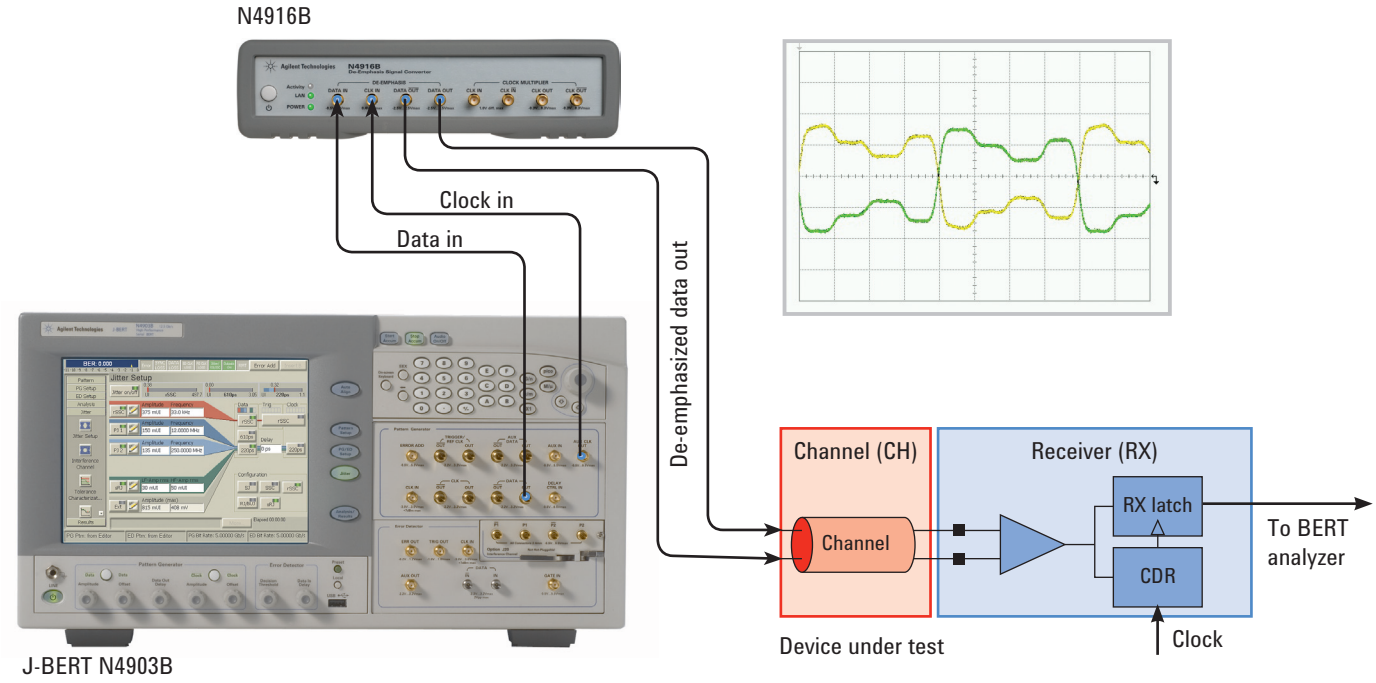

Figure 2. Generating a de-emphasis signal with N4916B and J-BERT N4903B

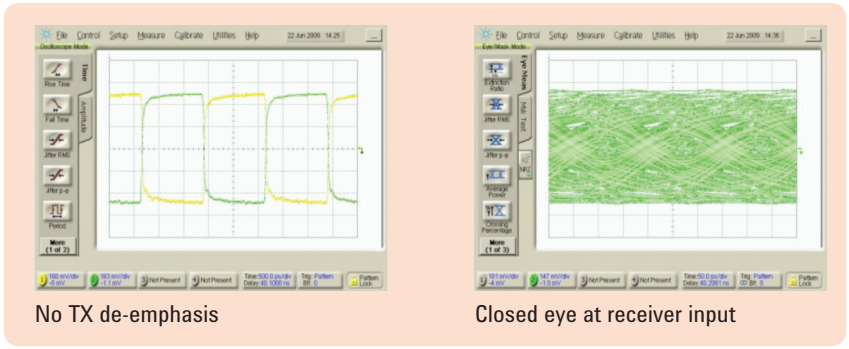
Agilent N4916B Applications

De-embedding signal degradations

The N4916B can also be used to compensate for some of the signal degradations caused by the test set up; e.g. cables, fixtures, test boards. This is helpful to optimize the jitter budget needed for accurate receiver tolerance characterization.



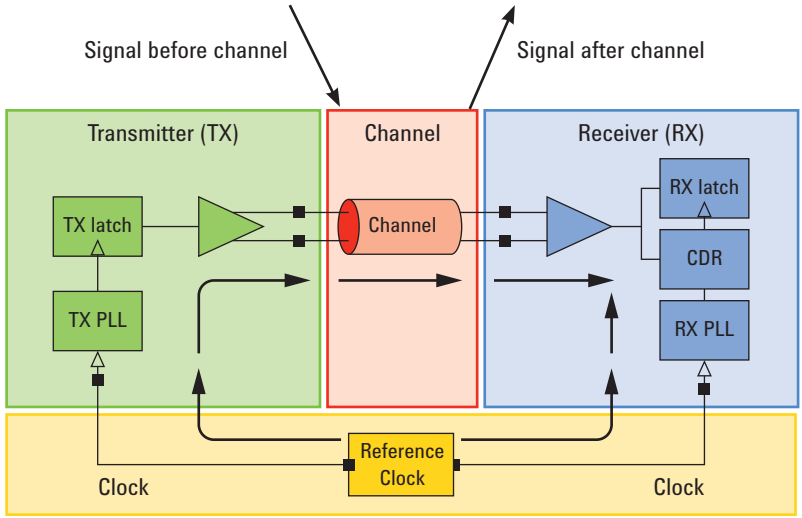


Figure 3. De-emphasis helps to compensate for the signal degradations caused by the channel. Also some of the signal degradations caused by cables, fixtures or test boards in the test setup can be compensated for using de-emphasis.

Agilent N4916B Applications

Analyze BER and eye performance of half-rate clocked devices

The clock multiplier option enables BER measurements using the forwarded half-rate clock to be used as sampling clock for J-BERT N4903B.

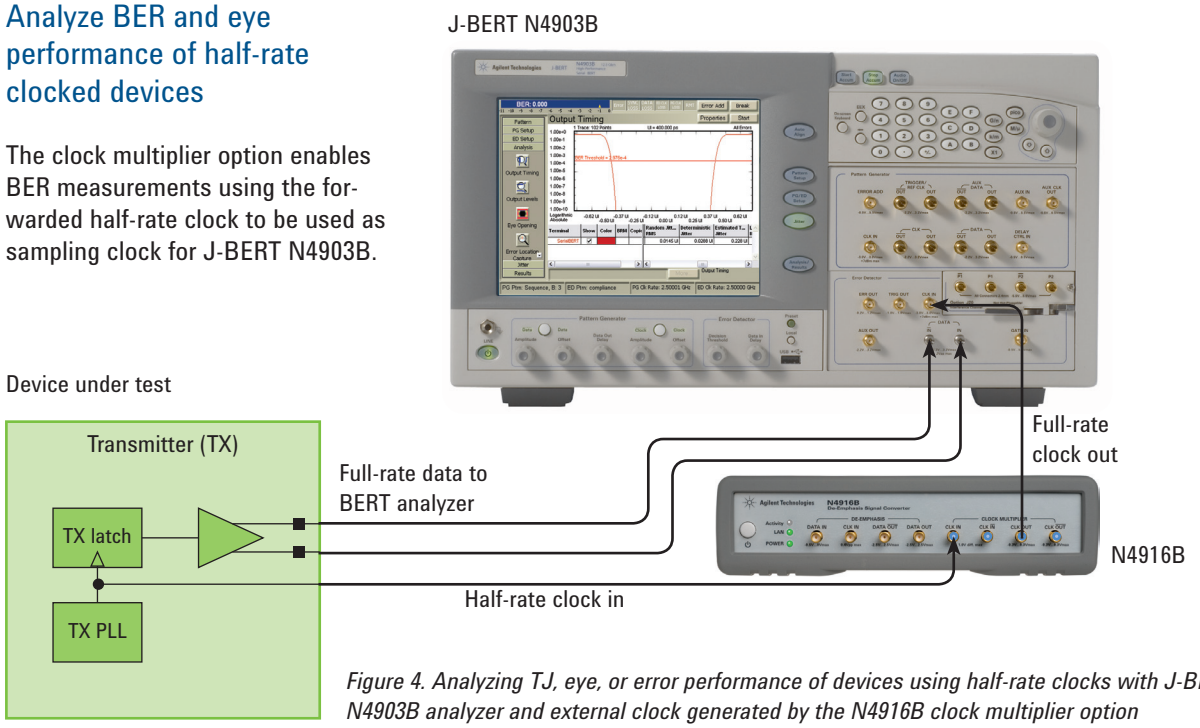

Figure 4. Analyzing TJ, eye, or error performance of devices using half-rate clocks with J-BERT N4903B analyzer and external clock generated by the N4916B clock multiplier option

Control and programming

The N4916B can be controlled via USB interface from the J-BERT N4903B user interface or from a stand-alone user interface.Programming examples are provided.

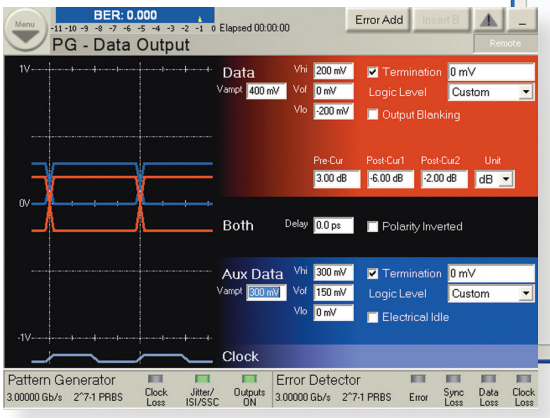

Figure 5. Convenient control of de-emphasis parameters via the GUI of J-BERT N4903B

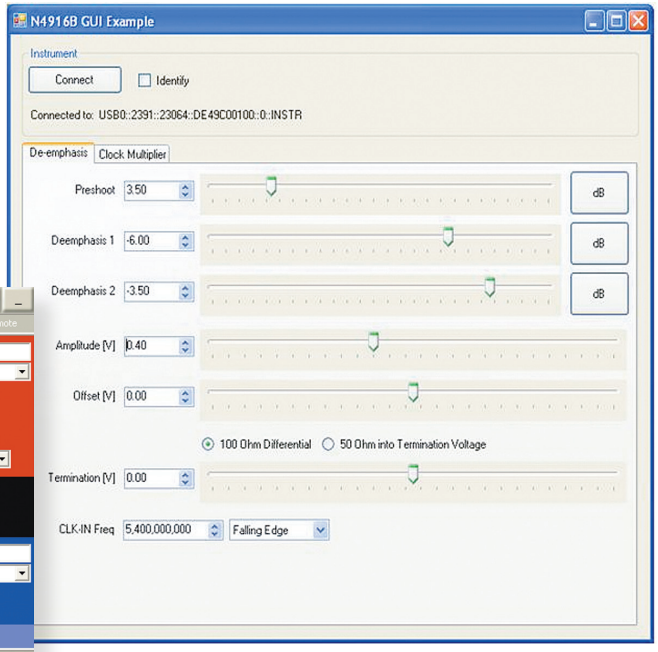

Figure 6. The N4916B can be controlled from a PC program, when operating as front-end for ParBERT 81250A or J-BERT N4903A or other pattern generators.

Agilent N4916B Specifications

Figure 7. Front panel view of N4916B

De-emphasis signal converter

Data rate	660 Mb/s to 10.5 Gb/s
Output format	NRZ
Pre-cursor	0 to +12.0 dB/0.1 dB resolution. Polarity as depicted, dB sum of all cursors. Cannot exceed max output swing and window.
Post-cursor 1	0 to –12.0 dB/0.1 dB resolution
Post-cursor 2	0 to –8.0 dB/0.1 dB resolution
Clock input, data input	50 Ω single ended, DC coupled
De-emphasis output	50 Ω differential, DC coupled. Terminate unused output.
Output amplitude	100 mV to 700 mV single ended; 200 mV to 1400 mV differential
Output voltage window	± 2 V
Coupling	DC, accepts unbalanced patterns
External termination voltage	± 2 V
Max. external voltages	± 2 V
Output transition times	< 40 ps typical (20% – 80%)
Jitter added	< 300 fs rms typical (0101 pattern)
Jitter transfer	Transparent to clock jitter. Data and clock must carry the same amount of jitter and need to be in phase.
Input voltage data input	1.26 Vpp, offset –0.79 V
Input voltage clock input	0.3 Vpp, offset 0 V
Connectors	SMA female

Clock multiplier

Input frequency range	1 to 7.5 GHz, Duty cycle 45-55%
Multiplier factors	1, 2
Input	50 Ω single ended, AC coupled
Input voltage swing	100 mV to 1 V differential
Input termination voltage	± 2 V
Output	50 Ω differential, AC coupled. Terminate unused output.
Output voltage swing	> 500 mV differential
Output transition time	< 30 ps typical (20% – 80%)
Jitter added	< 500 fs rms typical
Connector	SMA female

Agilent N4916B Specifications

General characteristics	
Operating temperature	5 °C to 40°C (–23 °F to 104 °F)
Storage temperature	–40 °C to +70°C (–65 °F to 158 °F)
Operating Humidity	95% relative humidity, non-condensing
Storage humidity	50 % relative humidity
Power requirements	100 V to 240 V, ±10 %, 47 Hz to 63 Hz, 80 VA
Physical dimensions WxHxD	Bench top (with bumper) 228 x 59 x 246 mm Rack mount (without bumper) ½* 19" width, 1U height: 213 x 44.5 x 245 mm
Weight net	2.05 kg
Weight shipping	*tbd*
Recommended recalibration period	1 year recommended
Warranty period	1 year return to Agilent. See ordering instructions for extended warranty.

Regulatory standards	
Safety	IEC61010-1:2001, EN61010-1:2001, CAN/CSA-C22 No. 61010-04, UL 61010-1:2004
EMC	IEC61326-1:1997+A1:1998, EN61326-1:1997+A1:1998
Quality management	ISO 9004, ISO 14000
Environmental	ROHS compliant

Remote control interfaces	
Connectivity	USB 2.0, rear panel, LAN
Programming language	SCPI
Via J-BERT	Via USB2 to the controlling J-BERT N4903B, which provides LAN, GPIB, USB as remote control interfaces. The N4903B requires software revision 6.5x or higher to control the N4916B.

Stand-alone user interface	
System requirements	OS: Microsoft Windows® (verified on XP, SP2), Agilent I/O Libraries Suite rev.15.5, Microsoft .NET 2.0

Specification assumptions

The specifications in this document describe the instruments warranted performance. Preliminary values are shown in italic. Non-warranted values are described as typical. All specifications are valid in a range from 5 °C to 40 °C ambient temperature after a warm-up time of 30 minutes. If not otherwise stated, all inputs and outputs need to be terminated with 50 Ω to GND.

Ordering information	
4-tap de-emphasis signal converter	N4916B
Clock multiplier	N4916B-001
Matched cable pair for connecting data and clock input to J-BERT N4903B	N4915A-010
Adapter 3.5 mm (f) to 2.4 mm (m) (1 each is needed for connecting N4916B with N4915A-010 cable kit to N4903A or ParBERT)	N4911A-002
Rack mount kit	E5810A-100
Warranty and calibration services	R1280, R1282
Productivity assistance	R1380-N49xx
Accessories included in N4916B	4 x 50 Ω terminations 3.5 mm, USB cable, Test report "UK6", USB-stick with software and user documentation

LXI is the LAN-based successor to GPIB, providing faster, more efficient connectivity. Agilent is a founding member of the LXI consortium.

Agilent Channel Partners

www.agilent.com/find/channelpartners
Get the best of both worlds: Agilent's measurement expertise and product breadth, combined with channel partner convenience.

Remove all doubt

Our repair and calibration services will get your equipment back to you, performing like new, when promised. You will get full value out of your Agilent equipment throughout its lifetime. Your equipment will be serviced by Agilent-trained technicians using the latest factory calibration procedures, automated repair diagnostics and genuine parts. You will always have the utmost confidence in your measurements. For information regarding self maintenance of this product, please contact your Agilent office.

Agilent offers a wide range of additional expert test and measurement services for your equipment, including initial start-up assistance, onsite education and training, as well as design, system integration, and project management.
